MyDomainsHub

Send email from your own domain, in six steps.

Receipts, sign-in links and order updates, from you@yourbusiness.

For businesses and the developers who build for them

Swipe →

Step 1

Create an account

1. The Free plan needs no card.
2. 10,500 emails a month, up to 350 a day.
3. New accounts send to their own team until we've approved them.

Step 2

Add your domain

1. The one your customers know: yourbusiness.com.
2. No domain yet? Find one at mydomainshub.com.
3. You can send from any address at it.

Step 3

Add the DNS records

1. Three DKIM records, plus an MX and an SPF record for bounces.
2. We show each one, ready to copy.
3. DNS on Cloudflare? We can add them for you.

Step 4

Wait for “Verified”

1. We check your records every 10 minutes.
2. DNS changes can take a few hours to spread.
3. Then you can send from any address at the domain.

Step 5

Send

1. By API: one HTTP call an email, JSON in and out.

2. By SMTP from WordPress, Laravel or Django: no code.

3. On Resend? Keep its Node.js SDK: a new key and one base URL.

Step 6

Watch it land

1. Follow every email from queued to delivered.
2. Addresses that bounce or complain are suppressed.
3. Signed webhooks tell your app as it happens.

MyDomainsHub

Your emails, under your own name.
