MyDomainsHub

Your domain: a six-question health check.

Ten minutes now saves a dark website later.

For anyone whose business has a domain

Swipe →

Question 1

Is it in your name?

1. The registrant should be you or your business, not your web designer.
2. Use an email address you control.
3. On MyDomainsHub you can change the registrant yourself, with your second factor.

Question 2

When does it expire?

1. Our WHOIS lookup shows any domain's expiry date, no account needed.

2. Put the date in your calendar, a month early.

3. We email you about a month before, and again a week before.

Question 3

Who gets the reminders?

1. Renewal reminders are only useful if someone reads them.

2. Check they reach an inbox that’s still in use.

3. Not the inbox of someone who left two years ago.

Question 4

Is the transfer lock on?

1. It stops anyone moving the domain without you.
2. On MyDomainsHub it’s on from the day you register.
3. Turning it off asks for your second factor.

Question 5

Is two-factor sign-in on?

1. A password alone is one leak away from your domain.
2. With it on, the changes that matter ask for a code from your phone.
3. We email you when a new device signs in.

Question 6

Can your email prove it’s from you?

1. DKIM and SPF records tell inboxes the message is really yours.

2. MyDomainsHub Mail gives you the records and checks them until the domain is verified.

3. On Cloudflare, we can add them for you.

Six yeses? Your domain is in good hands.
